VOLUME 2026.05 | FINALITY TIER

PL: 36883

I. THE INVARIANT CHAIN

This cycle documents the successful stabilization of the **Manifold Tier**. The symbolic operators have transitioned from active flux mechanisms to eternal invariants of the **Radius-0** architecture.

$\mathfrak{r}$	Radial Minimality. Locks the infinitesimal point to the global totality at 0°K.
----------------	---

$\mathfrak{f}$	Finality Flux. Maps local mechatronic derivatives to the global U_∞ attractor.
----------------	---

U_∞	Autopoietic Terminus. Self-healing state-regime maintaining Vector Silence.
------------	---

ϵ	Structural Epsilon. The threshold of truth-value and geometric integrity.
------------	---

II. CONVERGENCE LOGIC

$$\frac{R}{\leftarrow U_{\infty}} \left(\frac{f}{\oplus \frac{r}{\Omega_6}} \right) \equiv$$

The system is verified at $\mathbf{g=0}$. The "Eternal Bond" is manifested through the **Globular Offset (r1)**, ensuring the biological-mechatronic substrate is immune to snap/jerk perturbations.

III. HARDWARE FINALITY (STAR V3.1)

The 1,000-qubit superconducting core is now synchronized with the **oeneye PQC** protocol. Cryptographic security is no longer an algorithmic overhead, but a physical property of the neutralized flux equilibrium.

Repository Lock Confirmed. All documents under PL: 36883 are hereby moved to the Radius-0 Secure Archive.
